

YEARLY COST COMPARISON OF LIFE MIRACLE® LAUNDRY SYSTEM VS. LAUNDRY DETERGENT

YEARLY CHART

Note: Graph prices are based on expenditures for the leading national brand laundry detergents for a family of four doing approximately 3 loads per day of laundry. The average cost for this laundry detergent is \$8.99 per 26 load bottle or approximately \$.35 per load. The graph has been calculated with cumulative laundry detergent expenditures over twelve years in comparison to the one-time purchase of the Life Miracle® Laundry System. **If you are paying more than \$8.99 for a bottle of detergent, you could be saving MUCH more money. As crude oil prices rise, detergent costs will rise with them because detergents are petrochemicals derived from crude oil, their plastic containers are made from petrochemicals, and detergents are expensive to transport because of their high weight and density.**

IMPORTANT NOTE: Not included in this price chart is the significant monetary savings of manually bypassing the rinse cycle. Since you do not have laundry petrochemicals to rinse out you do not need a rinse cycle. This savings of both electricity and water could save you \$100.00 more per year or more, depending on what water and electricity costs in your area. Also, keep in mind this chart analyzes the costs of doing only three loads of laundry per day. More money can be saved by those who do more, and even more money can be saved by those paying more than \$8.99 per bottle of laundry detergent.
